

Submission Summary

Conference Name

"PICET2025-Future Trends in Computing Systems and Innovations in Sustainable Engineering"

Track Name

Artificial Intelligence and Machine Learning (clone)

Paper ID

756

Paper Title

Sync Insights: An Industry Integration Information System

Abstract

Sync Insight is a data management and visualization platform designed to enhance organizational efficiency through real-time data synchronization and insightful analytics. This paper explores the architecture, implementation, and impact of Sync Insight in streamlining data management processes. The research delves into the technical aspects of building the platform using the MERN stack and discusses its scalability and usability for businesses aiming for data-driven decision-making.
